

## Django Admin Feature

Django provides a **built-in admin interface** to manage database records easily. It allows developers to perform CRUD (Create, Read, Update, Delete) operations without writing extra code.

### Advantages of Built-in Admin

- **Saves time** – No need to build an admin panel from scratch.
- **Secure** – Comes with authentication and permission handling.
- **Customizable** – Can be modified to fit project needs.
- **User-friendly** – Provides an easy interface to manage data.

### Register a Model in Django Admin

Add this code in admin.py inside your app:

```
from django.contrib import admin  
from .models import YourModel
```

```
admin.site.register(YourModel)
```

### Command to Create Superuser

Run this command in the terminal:

```
python manage.py createsuperuser
```
