

1. Difference between Margin and Padding:

Margin:

Margin is used to create distance between the elements and make space outside the element border. Separating the elements from its surroundings.

```
div{  
    margin: 20px;  
}
```

Padding:

It is used to make space inside the element border (between the content and the border.)

Pushing the content inwards , away from the border.

```
div{  
    padding:20px;  
}
```

Feature	Margin	Padding
Location	Outside the border	Inside the border
Purpose	To control layout spacing	To control content spacing

Effect	Create space between elements	Create space between content and border
--------	----------------------------------	---

2. Box-sizing property affect the layout

a. content-box:

Height and width is apply to content only.

Padding and border is not included.

```
*{
  box-sizing:content-box;
}
```

b.border-box:

Height and width properties apply to the content , padding and border.

Padding and border included.

```
*{
  box-sizing:border-box;
}
```
