

Semantic and Non-semantic

Semantic Elements:

This makes the structure of the document more understandable and improves accessibility.

Example of semantic:

<header> : header tag

<nav>: Navigation menu

<section>: grouping of element

Non-semantic Elements:

Non-semantic tags are HTML elements that do not provide information about their content. They are often used for styling or layout purposes.

Example of non-semantic:

****: span tag used for designing.

<div>: container for grouping of elements.
