

Block Level Elements:

Block-level elements are designed to occupy the full width of their parent container and start on a new line

Example of Block level:

<h1> : header tag

<p>: paragraph tag

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
  <title>Block-Level Example</title>
```

```
</head>
```

```
<body>
```

```
  <div>
```

```
    <h1>This is a block-level heading</h1>
```

```
    <p>This is a block-level paragraph.</p>
```

```
  </div>
```

```
</body>
```

```
</html>
```

Inline Elements:

Inline-level elements are designed to flow within a block of text. They do not start on a new line and only take up as much width as necessary.

Example of inline elements:

``: span tag

`<a>`: anchor tag

``: bold tag

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
  <title>Block and Inline Example</title>
```

```
</head>
```

```
<body>
```

```
  <div>
```

```
    <p>
```

This is a ``mixed`` example with ``inline`` elements inside a block-level paragraph.

</p>

</div>

</body>

</html>
