Media Query

A media query in CSS is a technique used to apply different styles to a webpage based on the characteristics of the user's device, such as screen size, resolution, orientation, etc.

@media *media-type* and *media-feature*{

}

 Media-type: screen, print, all

Media-feature: max-width, min-width, orientation ,etc

Orientation :

1. Landscape
2. portrait

Color scheme :

1. prefers-color-scheme: light
2. prefer-color-scheme: dark

example:

```
@media (min-width:200px){

        Body{

        Background-color:red;

}

}

@media (max-width:200px){

        Body{

        Background-color:red;

}

}
@media (orientation: portrait) {

  body {

    background-color: lightblue;

  }

}
```

```css
@media (orientation: landscape) {
    body {
        background-color: lightgreen;
    }
}
```
