When you would select id selector,class selector and tag selector. Explain with example.

Id selector:

      Use the ID selector when you need to style or manipulate a unique element on the page. IDs are best suited for elements that appear only once.

Example:

      `<div id="main-header">Welcome to My Website</div>`

```
#main-header {

        font-size: 24px;

        color: blue;

        text-align: center;

}
```

Class Selector:

      Use the class selector when you want to apply the same style to multiple elements. Classes are reusable and ideal for grouping elements with similar styles

Example:

      `<button class="btn ">Submit</button>`

      `<button class="btn ">Cancel</button>`

```
.btn {

  padding: 10px 20px;

  border: none;

  cursor: pointer;

}
```

Tag selector:

      Use the tag selector or element selector when you want to style all elements of the same type on the page.

Examples of tag selector are : `<header>`, `<p>`, `<img>`, etc

Example:

```html
<p>This is the first paragraph.</p>
<p>This is the second paragraph.</p>
```

```css
p {
    font-family: Arial, sans-serif;
    line-height: 1.5;
}
```
